## Entangled

Offers a comprehensive and accessible introduction to the theory of material entanglement and entrapment, enriched with vivid examples from everyday life Entangled explores how archaeological evidence can help provide a better understanding of the direction of human social and technological change, demonstrating how the interrelationship of humans and things is a defining characteristic of human history and culture. Using examples drawn from both the early farming settlements of the Middle East and daily life in the modern world, Ian Hodder highlights the complex co-dependencies of humans and things—arguing that the maintenance and sustaining of material worlds are the unseen drivers of human development. Updated and expanded, Entangled offers new perspectives on the study of the relationality between things and humans. In this edition, the author reframes relationality in terms of various forms of dependence to better explore inequality, injustice, and the ways people get entrapped in detrimental social and economic situations. An entirely new chapter focuses on human dependence on other humans, such as between colonial powers and colonized people. Increased focus is placed on object-oriented ontologies and assemblages, symmetrical archaeology, and indigenous and radical approaches in archaeology that critique relationality and posthumanism. A wide range of new examples, references, and literature are presented throughout the book. Argues that dependence on things forces humans down particular evolutionary pathways and social trends Demonstrates how long-standing entanglements can be irreversible and increase in scale and complexity over time Integrates archaeology, natural and biological sciences, and the social sciences Presents a critical review of key contemporary perspectives, including material culture studies, phenomenology, evolutionary theory, cognitive archaeology, human ecology, and complexity theory Entangled: A New Archaeology of the Relationships between Humans and Things, Second Edition is essential reading for undergraduate and graduate students, lecturers, researchers, and scholars in the fields of archeology, anthropology, material culture studies, and related fields across the social sciences and humanities.

## Entangled

Love is such a unique journey for all of us. It teaches us so many things. It teaches us who we are, who we are not, who we want to be, what we want and do not want. It teaches us about joy, pain, pleasure and compromise. It stretches us to our limits and takes us to places we had not been before \"love\" came along. It can sweep you away. It can warm your heart. It can make you want to run away and it can make you want to stay. Through love's journey in my life and writing about it I have become more intimate with myself learning much along the way about myself, others, life, compassion, empathy. It has brought me to a whole new depth with my own being.

## Entangled

Entangled is an extrapolation of contemporary scientific, political, ethical, and social trends to a suspenseful outcome, the Outrage, with an action-filled climax. The story is presented as an episodic series of scenes, vignettes of seemingly independent events or actions, by persons unknown to one another and often widely separated in both space and time. A sampling of the episodes ultimately culminating in the Outrage includes a killer bee attack, an epidemic of dying babies, a sleeping cow disease, a small boy chasing chickens and killing ants, a new type of computer, a young lady defending her honor and reputation, a CIA study, abortion, an unusual young man, a South American War, pointless vandalism of a glass factory, and a professorial comment on a term paper. One, who is familiar with chaos theory and the butterfly effect, will recognize the fluttering of small wings in this collection of scenes. Indeed, Entangled is a societal example of the butterfly

effect. This impression is enhanced by the narrator, the Chronicler, who, acting at the request of the United States president, presents the vignettes not in chronological order but rather in the order a historian might have discovered them.

## **Entangled Narratives**

As people are living longer on average than ever before, the number of those with dementia will increase. Because many will live a considerable time at home with their diagnosis, we need to know more about the ways people can adapt to and learn to live with dementia in their everyday lives. Lars-Christer Hydén argues in this book that to do so will involve re-imagining what dementia really is and what it can mean to the afflicted and their loved ones. One of the most important everyday opportunities for sharing experiences is the simple act of storytelling. But when someone close to you gradually loses the ability to tell stories and cherish the shared history you have together, this is seen as a threat to the relationship, to the feeling of belonging together, and to the identity of the person diagnosed. Therefore, learning about how people with dementia can participate in storytelling along with their families and friends helps to sustain those relationships and identities. In *Entangled Narratives*, Hydén not only emphasizes the possibilities that are inherent in collaborative storytelling, but instructs professionals and otherwise healthy relatives to learn how to effectively listen and, ultimately, re-imagine their patients and loved ones as collaborative meaning-makers in their lives.

## **Entangled Empathy**

In *Entangled Empathy*, scholar and activist Lori Gruen argues that rather than focusing on animal “rights,” we ought to work to make our relationships with animals right by empathetically responding to their needs, interests, desires, vulnerabilities, hopes, and unique perspectives. Pointing out that we are already entangled in complex and life-altering relationships with other animals, Gruen guides readers through a new way of thinking about—and practicing—animal ethics. Gruen describes entangled empathy as a type of caring perception focused on attending to another’s experience of well-being. It is an experiential process involving a blend of emotion and cognition in which we recognize we are in relationships with others and are called upon to be responsive and responsible in these relationships by attending to another. When we engage in entangled empathy we are transformed and in that transformation we can imagine less violent, more meaningful ways of being together.

## **Entangled Life**

NEW YORK TIMES BESTSELLER • A “brilliant [and] entrancing” (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. “Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world.”—Ed Yong, author of *An Immense World* ONE OF PEOPLE’S BEST BOOKS OF THE 2020S • ONE OF THE BEST BOOKS OF THE YEAR: Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In the first edition of this mind-bending book, Sheldrake introduced us to this mysterious but massively diverse kingdom of life. This exquisitely designed volume, abridged from the original, features more than one hundred full-color images that bring the spectacular variety, strangeness, and beauty of fungi to life as never before. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life’s processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with

them—are changing our understanding of how life works. Winner of the Wainwright Prize, the Royal Society Science Book Prize, and the Guild of Food Writers Award • Shortlisted for the British Book Award • Longlisted for the Rathbones Folio Prize

## **Entangled Performance Histories**

Entangled Performance Histories is the first book-length study that applies the concept of "entangled histories" as a new paradigm in the field of theater and performance historiography. "Entangled histories" denotes the interconnectedness of multiple histories that cannot be addressed within national frameworks. The concept refers to interconnected pasts, in which historical processes of contact and exchange between performance cultures affected all involved. Presenting case studies from across the world—spanning Africa, the Arab-speaking world, Asia, the Americas and Europe—the book's contributors systematically expand, exemplify and examine the concept of "entangled histories," thus introducing various innovative concepts, theories and methodologies for investigating reciprocally consequential processes of interweaving performance cultures from the past. Bringing together examples of entanglements in theater and performance histories from a broad variety of geographical and historical backgrounds, the book's contributions build together a broad basis for a possible and necessary paradigmatic shift in the field of theater and performance historiography. Ideal for researchers and students of history, theater, performance, drama and dance, this volume opens novel perspectives on the possibilities and challenges of investigating the entangled histories of theater and performance cultures on a global scale.

## **The Entangled God**

In *The Entangled God*, Kirk Wegter-McNelly addresses the age-old theological question of how God is present to the world by constructing a novel, scientifically informed account of the God–world relation. Drawing on recent scientific and philosophical work in "quantum entanglement," Wegter-McNelly develops the metaphor of "divine entanglement" to ground the relationality and freedom of physical process in the power of God's relational being. *The Entangled God* makes a three-fold contribution to contemporary theological and religious discourse. First, it calls attention to the convergence of recent theology around the idea of "relationality." Second, it introduces theological and religious readers to the fascinating story of quantum entanglement. Third, it offers a robust "plerotic" alternative to kenotic accounts of God's suffering presence in the world. Above all, this book takes us beyond the view of theology and science as adversaries and demonstrates the value of constructively relating these two important areas of intellectual investigation.

## **Entangled Political Economy**

Volume 18 *Entangled Political Economy* of the Book Series *Advances in Austrian Economics* examines the concept 'entangled political economy' from several distinct but complementary points of view. The volume is proof that Wagner's notion of entanglement opens new vistas for political economy in all its dimensions.

## **Entangled Legalities Beyond the State**

Shows that law is often better understood as an entangled web rather than as a coherent, orderly system.

## **Entangled State Representations in Quantum Optics**

This book highlights the applications of continuous-variable entangled state representations in the research areas of quantum optics via the integration method within an ordered product of operators (IWOP). As a way to develop the Dirac's symbolic method, the IWOP method has made the integration of non-commutative operators possible by arranging non-commutable operators within an ordered product symbol. It not only deals with many existent quantum optics problems but also explores new research fields. The book also

establishes a theoretical framework for solving important quantum optics subjects by taking full advantage of the entangled state representations. With original methods and detailed descriptions, the book is suitable for researchers, instructors, and students interested in quantum mechanics, quantum optics, and quantum information science.

## **Entangled Realms**

Science is about knowing through the eyes of the world and the eyes of the mind. There is a third way of knowing, however, and that is through the eyes of the spirit. It is logical that these different ways of experiencing the world should converge into a single point, for that is where truth ultimately lies.

Mathematician, Rachel Lajoie, and her partner, Terry McGuire, are caught in a web that draws them ever closer to that intersection, and in the background are malevolent forces intent on exploiting insight and knowledge for the sake of power and greed. *Entangled Realms* is a story about science as a tool of both good and evil; about the power of coercion; about violation of principles. It is also a story about non-local influences and about love love, not just as an emotion, but as a force.

## **Entangled Territorialities**

*Entangled Territorialities* offers vivid ethnographic examples of how Indigenous lands in Australia and Canada are tangled with governments, industries, and mainstream society. Most of the entangled lands to which Indigenous peoples are connected have been physically transformed and their ecological balance destroyed. Each chapter in this volume refers to specific circumstances in which Indigenous peoples have become intertwined with non-Aboriginal institutions and projects including the construction of hydroelectric dams and open mining pits. Long after the agents of resource extraction have abandoned these lands to their fate, Indigenous peoples will continue to claim ancestral ties and responsibilities that cannot be understood by agents of capitalism. The editors and contributors to this volume develop an anthropology of entanglement to further examine the larger debates about the vexed relationships between settlers and indigenous peoples over the meaning, knowledge, and management of traditionally-owned lands.

## **Entangled Lives**

This book considers three questions about understanding the past. How can we rethink human histories by including animals and plants? How can we overcome nationally territorialised narratives? And how can we balance academic history-writing and indigenous understandings of history? This is a tentative foray into the connections between these questions. *Entangled Lives* explore them for a large area that has seldom been explored in academic inquiry. The 'Eastern Himalayan Triangle' includes both uplands and lowlands. The region is the meeting point of three global biodiversity hotspots connecting India and China across Myanmar/Burma, Bangladesh and Bhutan. The 'Triangle' is treated as a multispecies site in which human histories have always been utterly intertwined with plant and animal histories. It foregrounds that history is co-created – it is always interspecies history – but that its contours are locally specific.

Written for enthusiasts of quantum physics and those intrigued by the mysteries of the universe, Entangled Realities provides a captivating journey through the intricate nature of entangled realities. Whether you are a student, researcher, or simply curious about the profound implications of quantum entanglement, this book offers a rich exploration of a complex phenomenon that continues to push the boundaries of our understanding.

## **Entangled Histories of the Balkans - Volume Four**

The present volume is the last in the Entangled Balkans series and marks the end of several years of research guided by the transnational, "entangled history" and *histoire croisée* approaches. The essays in this volume

address theoretical and methodological issues of Balkan or Southeast European regional studies—not only questions of scholarly concepts, definitions, and approaches but also the extra-scholarly, ideological, political, and geopolitical motivations that underpin them. These issues are treated more systematically and by a presentation of their historical evolution in various national traditions and schools. Some of the essays deal with the articulation of certain forms of “Balkan heritage” in relation to the geographical spread and especially the cultural definition of the “Balkan area.” Concepts and definitions of the Balkans are thus complemented by (self-)representations that reflect on their cultural foundations.

## **Entangled Episode Four**

It isn't over. But it will be soon. Emma and Bruce might've found each other again, but it won't count. The empties have found new hosts. And they are coming for one last fight. The war for everything – for the very fabric of the universe – is about to begin. Emma and Bruce will have to clutch onto one another – and their connection – harder than ever before. It won't be enough if the Coalition does not come to their aid. For it is time for the Milky Way to learn the lesson at the heart of every universal key – connection. ... When your enemies outnumber you, find new friends. Bruce and Emma might've found each other again, but that won't help them. Chen has joined with John and the empties, and there may be no stopping them. Emma and Bruce's only chance lies in finding out the truth hidden behind their entanglement. It'll cost them. Time. And that's the last thing the universe has. The empties have waited too long to feast on this realm's energy, and nothing will stand in their way, even if it's wrapped up in destiny. ... ## **Entangled Minds**

Is everything connected? Can we sense what's happening to loved ones thousands of miles away? Why are we sometimes certain of a caller's identity the instant the phone rings? Do intuitive hunches contain information about future events? Is it possible to perceive without the use of the ordinary senses? Many people believe that “psychic phenomena” are rare talents or divine gifts. Others don't believe they exist at all. But the latest scientific research shows that these phenomena are both real and widespread, and are an unavoidable consequence of the interconnected, entangled physical reality we live in. Albert Einstein called entanglement “spooky action at a distance”—the way two objects remain connected through time and space, without communicating in any conventional way, long after their initial interaction has taken place. Could a similar entanglement of minds explain our apparent psychic abilities? Dean Radin, senior scientist at the Institute of Noetic Sciences, believes it might. In this illuminating book, Radin shows how we know that psychic phenomena such as telepathy, clairvoyance, and psychokinesis are real, based on scientific evidence from thousands of controlled lab tests. Radin surveys the origins of this research and explores, among many topics, the collective premonitions of 9/11. He reveals the physical reality behind our uncanny telepathic experiences and intuitive hunches, and he debunks the skeptical myths surrounding them. Entangled Minds sets the stage for a rational, scientific understanding of psychic experience.

## **Global Entangled Inequalities**

This book presents studies from across Latin America to take up the challenge of exploring the plurality of social inequalities from a global perspective. Accordingly, it identifies the structural forces of social inequalities on a world scale as they shape asymmetries observed in a wide array of phenomena, such as racial and gender inequality, urbanization, migration, commodity production, indigenous mobilization, ecological conflicts, and the "new middle class". A rich contribution to the study of the interconnections between the global social structure and multiple local and national hierarchies, *Global Entangled Inequalities* brings consistently together a variety of conceptual approaches, ranging from ethnographies to legal genealogies, and will therefore appeal to scholars across the social sciences with interests in social theory, power analysis, intersectionality studies, urban studies, and global social and environmental justice.

## **Entangled Future Im/mobilities**

How are im/mobilities articulated, imagined and practiced in relation to multiple futures? A critical examination of im/mobilities raises questions as to how power relations and crisis-driven futures enable, inhibit or prevent mobility, what meanings are culturally constructed around im/mobilities and how they are experienced. The contributors to this volume look at entangled future mobilities and immobilities using humanities and social science approaches in diverse examples: Afrofuturist poetry, de-extinction projects, dystopian novels, a Uruguayan planned relocation program, lives of rural Zambian women, climate adaptation in Morocco and Austrian financial literacy policy.

## **Perspectives on the Entangled History of Communism and Nazism**

The collective work deals with the problems of if, how, and why the histories of German Nazism and Soviet Communism should and could be situated within one coherent narrative. As historical phenomena, can Communism and Nazism fruitfully be compared to each other? Do they belong to the same historical contexts? Have they influenced, reacted to or learned from each other? Are they interpreted, represented and used together by posterity? The background of the book is twofold. One is external. There is an ongoing debate about the historical entanglements of Communism and Nazism, especially about Auschwitz and Gulag, respectively. Our present fascination with the evil history of genocide has situated the Holocaust as the borderline event in Western historical thinking. The crimes against humanity perpetrated by the Soviet Communist regime do not have the same position but are considered more urgent in the East and Central European states that were subdued by both Nazi and Communist regimes. The other, internal background is to develop an analytical perspective in which the "comnaz" nexus can be understood. Using a complex approach, the authors investigate Communist and Nazi histories as entangled phenomena, guided by three basic perspectives. Focusing on roots and developments, a genetic perspective highlights historical, process-oriented connections. A structural perspective indicates an attempt to narrow down "operational" parallels of the two political systems in the way they handled ideology to construct social utopia, used techniques of terror, etc. A third perspective is genealogical, emphasizing the processing and use of Communist and Nazi history by posterity in terms of meaning and memory: What past is worth remembering, celebrating, debating—but also distorting and forgetting? The chapters of the book address phenomena such as ideology, terror, secular religion, museum exhibits, and denial.

## **Entangled and Empowered: Agency in Multispecies Communities**

'Entangled and Empowered: Agency in Multispecies Communities' is a collection that approaches the inevitable reality of entanglement between humans and other beings from a perspective of action and wonder. It argues that actors as diverse as bacteria, snakes, butterflies, ducks, and cacao trees can help us enact joy in fields as different as art, cinema, literature, and anthropology. While acknowledging the imminent reality of climate change, the sixth extinction, and other overwhelming threats to the Earth, this book argues that humans continue to live, and so do the beings whose lives are entwined with ours, for whom we can

acknowledge and work to improve their existence. The nine essays in this volume trace that acknowledgment and work through three sections centered on visual media, queer and feminist readings of empowerment, and movements beyond the boundaries enacted by anthropocentric Western society. Drawing on theories such as new materialism, posthumanism, and ecofeminism, and with an international perspective from authors working at American, South Asian, and East Asian universities, 'Entangled and Empowered' finds hope in the shadow of despair. It engages with work by Anna Lowenhaupt Tsing on entanglement, Donna Haraway on kin-making and multispecies communities, and Karen Barad on intra-actions, among others, while also showing how critiques of these ideas can make the world both more promising and more endangered. This collection will be useful for scholars working in all subfields of environmental humanities, especially those intersecting with the theories described above and as an archive of examples analyzing practical aspects of agency in diverse multispecies communities. Scholars studying texts as well-known as 'The Handmaid's Tale' and as obscure as the codices of the Mopan Maya will find value in having both under one cover.

## **Shifting Lines, Entangled Borderlands**

Tracing multiple mobilities, entangled borderlands, microhistory and space, and human and nonhuman actors, Jan Musekamp demonstrates how an inner-Prussian railroad line turned into a transnational force, overcoming borders and connecting Europeans in a time of rising nationalism. *Shifting Lines, Entangled Borderlands* investigates the dichotomy between a globalizing world and tighter border control in nineteenth-century Central and Eastern Europe, focusing on the Royal Prussian Eastern Railroad (Ostbahn) between the 1830s and 1930s. The line was initially planned as a major internal modernizing project to connect Prussia's capital of Berlin to East Prussia's provincial capital of Königsberg (today's Kaliningrad). Soon, the Ostbahn connected to the growing Imperial Russian railroad network, thus becoming a backbone of European East–West transportation in trade, tourism, technological exchange, and migration. The First World War temporarily disrupted and reconfigured existing networks, adapting them to new political regimes and borders. However, World War II and its aftermath altered mobility patterns more permanently, dividing not only the Ostbahn tracks but the whole continent for decades to come. From border towns and major cities to unique structures, such as stations or bridges, this volume analyzes the obvious and not-so-obvious nodes of the Central and Eastern European rail network—and the spaces in between.

## **Investigations on the Entangled History of Colonialism and Mission in a New Perspective**

The book investigates the \"Entangled History of Colonialism and Mission\" in a historical, global, regional-political, social, post-colonial, ethical, cultural-anthropological, religious, as well as missiological perspective. Past injustices and failures, as well as sustainable developments must be methodically clarified and understood that conclusions can positively influence our understanding. Traumata of the colonial past and its entanglement with mission shape the self-understanding of since long independent churches. Reflections on their experiences are important for an ongoing culture of remembrance.

## **Entangled Terrains and Identities in Cuba**

*Entangled Terrains and Identities in Cuba: Memories of Guantánamo* explores the challenges and conflicts of life in the transnational spaces between Cuba and the United States by examining the lived experiences of Alberto Jones, a first-generation black Cuban who worked at the U.S. naval base at Guantánamo Bay. Asa McKercher and Catherine Krull take readers on a journey through Jones's life as he crossed the entangled political, racial, cultural, and economic boundaries, both in Cuba and living as a black Cuban in central Florida. McKercher and Krull argue that Jones's story encapsulates the reality of recent Caribbean and Cuban experiences as they deconstruct the events of his life to reveal the broader cultural and social implications of identity, boundaries, and belonging throughout Caribbean and Cuban history.

## **Entangled Threads: The Ties That Bind**

In the realm of human connections, adoption stands as a profound tapestry woven with threads of love, loss, hope, and resilience. *"Entangled Destinies: The Ties That Bind"* is an exploration of the intricate world of adoption, delving into the lives of adoptees, birth parents, and adoptive parents to reveal the unbreakable bonds that unite them. ## **Entangled Mobilities in the Transnational Salsa Circuit**

The Open Access version of this book, available at <http://www.taylorfrancis.com/books/e/9781003002697>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license. With attention to the transnational dance world of salsa, this book explores the circulation of people, imaginaries, dance movements, conventions and affects from a transnational perspective. Through interviews and ethnographic, multi-sited research in several European cities and Havana, the author draws on the notion of *"entangled mobilities"* to show how the intimate gendered and ethnicised moves on the dance floor relate to the cross-border mobility of salsa dance professionals and their students. A combination of research on migration and mobility with studies of music and dance, *Entangled Mobilities in the Transnational Salsa Circuit* contributes to the fields of transnationalism, mobility and dance studies, thus providing a deeper theoretical and empirical understanding of gendered and racialised transnational phenomena. As such it will appeal to scholars across the social sciences with interests in migration, cultural studies and gender studies.

## **Entangled Systems**

An introductory textbook for advanced students of physics, chemistry and computer science, covering an area of physics that has lately witnessed rapid expansion. The topics treated here include quantum information, quantum communication, quantum computing, teleportation and hidden parameters, thus imparting not only a well-founded understanding of quantum theory as such, but also a solid basis of knowledge from which readers can follow the rapid development of the topic or delve deeper into a more specialized branch of research. Commented recommendations for further reading as well as end-of-chapter problems help the reader to quickly access the theoretical basics of future key technologies.

*"Sherlock Holmes, now in his seventies, retired from investigations and peaceably disguised as a professor at Cambridge, is shaken when a modestly successful author in his late-sixties named Arthur Conan Doyle calls upon him at the university. This Conan Doyle, notable for historical adventure stories, science fiction, and a three-volume history of the Boer War (but no detective tales), somehow knows of the false professor's*

true identity and pleads for investigative assistance. Someone is trying to kill Conan Doyle. Who? Why? Good questions, but what intrigues Holmes most is how the 'middling scribbler' ascertained Holmes's identity in the first place, despite the detective's perfect disguise. Holmes takes the case\"--

## **Holmes Entangled**

In 1900, German legislators passed the Civil Code, a controversial law that designated women as second-class citizens with regard to marriage, parental rights, and marital property. Despite the upheavals in early twentieth-century Germany – the fall of the German Empire after the First World War, the tumultuous Weimar Republic, and the destructive Third Reich – the Civil Code remained the law of the land. After Nazi Germany's defeat in 1945 and the founding of East and West Germany, legislators in both states finally replaced the old law with new versions that expanded women's rights in marriage and the family. *Entangled Emancipation* reveals how the complex relationship between the divided Germans in the early Cold War catalysed but sometimes blocked efforts to reshape legal understandings of gender and the family after decades of inequality. Using methods drawn from gender history and discourse analysis, the book restores the history of the women's movements in East and West Germany. *Entangled Emancipation* ultimately explores the parallel processes through which East and West Germany reimagined, negotiated, and created new civil laws governing women's rights after the Second World War.

## **Entangled Emancipation**

Because evolutionary nature can be seen only through the product of evolution - the human eye - the observer must always be aware of the physical limitations inherent in the act of perception. Krasner's study is an exploration of how Charles Darwin's representational techniques, intended to emphasize the spatial and temporal limitations besetting the human observer without diminishing the grand scheme of evolutionary nature, transformed his opulently \"entangled\" nature into a formless, psychologically interior landscape. Evolutionary nature's abundance and variety required Darwin and the turn-of-the-century British nature writers who followed him to portray the world as though seen through a physiologically limited, human eye. Investigating the shift from Victorian to modernist sensibilities in the context of evolutionary biology and perceptual theory, Krasner shows that, while profoundly attentive to landscape and biology, nature writers chose a mode of representing nature based on visual perception that led them toward a more abstract and psychological portrayal of natural landscapes. Using the visual perception theories of Berkeley, Hamilton, Brewster, Koffka, and James, Krasner investigates the ways in which Thomas Hardy, Joseph Conrad, and D.H. Lawrence, as well as other naturalists and nature writers, came to portray nature as the locus of optical illusion and visual failure. Narrative portrayals of nature become narrative portrayals of the perception of nature in which the physiological limitations of the human eye determine the structure of the representation. Bringing together literary, scientific, and popular texts, Krasner establishes the extent of Darwin's impact on the English literary tradition.
